Change in last 7 days

-15

Average cases per day (last 7 days)

1.3

There have been **1,022 confirmed cases** of COVID-19 in Southampton (includes both pillar 1 and 2 cases). There were **9 confirmed cases** in the **last 7 days**, which is a **reduction of -15** compared to the **previous 7 days**.

Data is correct at time of publication, but is subject to change due to reporting delays and corrections. Therefore, any changes in the number of infections should be **interpreted alongside overall trends**, as there will be daily fluctuations. It is more important to consider any **sustained increases** that may occur.

The chart to the left shows the **daily number of confirmed cases** and the **7 day moving average** (to smooth out fluctuations) in Southampton. The number of **new cases peaked** in Southampton in **April** and has **experienced a sustained decline** since.

* Cases include both pillar 1 and 2

** Correct at time of publication, but may be revised in future weeks due to reporting delays

Increase

Southampton has a total of **403.9** cases per **100,000 population**.

Public Health England publish weekly the number of cases per 100,000 population in their COVID-19 Surveillance reports. The trend in the weekly number of cases per 100,000 population is shown in the chart to the left. In the most recent week (**week 35**) there were **7.91 cases per 100,000 population**, which is an **increase** compared to the **previous week (5.54 cases per 100,000 population in week 34)**. Overall, the number of **infections remain low**.

Numbers of cases vary by week and day (see case numbers above). Case numbers are also subject to revisions, especially most recent data. It should be noted that low case numbers can impact on the **reliability of estimates**.

* Cases include both pillar 1 and 2

** Correct at time of publication, but subject to revision in subsequent weeks due to reporting delays
