

COVID-19 confirmed cases*

Data up to 4th November

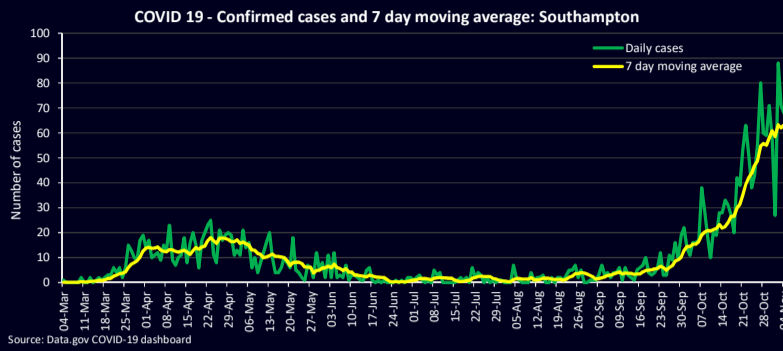

Total cases **
(Since 4th March 2020)
2,563

Cases in last 7 days **
442

Change in last 7 days
+52

Average cases per day (last 7 days)
63.1

There have been **2,563 confirmed cases** of COVID-19 in Southampton (includes both pillar 1 and 2 cases). There were **442 confirmed cases** in the **last 7 days**, which is an **increase of +52** compared to the **previous 7 days**.

Data is correct at time of publication, but is subject to change due to reporting delays and corrections. Therefore, any changes in the number of infections should be **interpreted alongside overall trends**, as there will be daily fluctuations. It is more important to consider any **sustained increases** that may occur.

The chart to the left shows the **daily number of confirmed cases** and the **7 day moving average** (to smooth out fluctuations) in Southampton. A consistent rise in the 7-day moving average since the beginning of September suggest infections are **increasing**, from the low levels experienced during the summer months.

* Cases include both pillar 1 and 2

** Correct at time of publication, but may be revised in future weeks due to reporting delays

7 day average cases per 100k population up to 4th November: **
175.0

7 day average cases per 100k population up to 9th November: **
154.4

Direction of travel to previous week
Increase

Southampton has a total of **1015.0 cases per 100,000 population**.

Weekly infection rates have been calculated using official data published by data.gov. This is calculated on a daily basis using infections data for the last 7 days and 2019 Mid Year Population Estimates. The trend in the 7 day rolling average number of cases per 100,000 population is shown in the chart to the left. In the most recent 7 day period **up to 4th November** there were **175.0 cases per 100,000 population**, which is an **increase** compared to the **preceding 7 days (154.4 cases per 100,000 population in 7 day period up to 28th October)**. Similar to the England trend, rates in Southampton have consistently increased since the beginning of September, although at present they remain below the **England average (243.3 cases per 100,000 population)**.

Numbers of cases vary by week and day (see case numbers above). Case numbers are also **subject to revisions**, especially most recent data. It should be noted that low case numbers can impact on the **reliability of estimates**.

* Cases include both pillar 1 and 2

** Correct at time of publication, but subject to revision in subsequent weeks due to reporting delays

COVID-19 related deaths

Deaths occurring up to 30th October

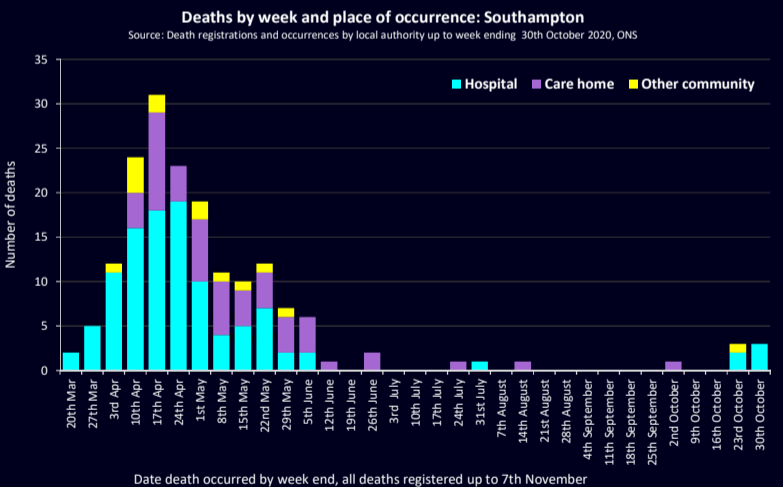

Total deaths
175

Of which
107

Community
68
(54 of which in care homes)

In the last week
3
Deaths

Change from previous week
0

There have been a total of **175 COVID-19 related resident deaths** in Southampton. Of those, **107 died in hospital** and **68 in the community (54 of which were in care homes)**. There was **3 COVID-19 related deaths** in the most recent week, which is **the same** when compared to the **previous week**.

The **chart** to the left shows the number of **COVID-19 related deaths by week and setting**. The number of **COVID-19 related deaths peaked in mid-April** and have declined since.

In Southampton, resident **deaths** are now at **expected levels** compared to previous years.

Latest data shows that there was **2 COVID-19 related deaths in University Hospital Southampton (UHS)** between the 2nd November up to 8th November. This data is different from that published by ONS as it doesn't necessarily include Southampton residents, only those who have died at UHS.

Please note: data correct at time of publication, but subject to revision in subsequent weeks due to reporting delays
