

## COVID-19 confirmed cases\*

Data up to 8th September

Total cases \*\*

**1,038**

Cases in last 7 days \*\*

**15**

Change in last 7 days

**+5**

Average cases per day (last 7 days)

**2.1**

There have been **1,038 confirmed cases** of COVID-19 in Southampton (includes both pillar 1 and 2 cases). There were **15 confirmed cases** in the **last 7 days**, which is an **increase of +5** compared to the **previous 7 days**.

Data is correct at time of publication, but is subject to change due to reporting delays and corrections. Therefore, any changes in the number of infections should be **interpreted alongside overall trends**, as there will be daily fluctuations. It is more important to consider any **sustained increases** that may occur.

The chart to the left shows the **daily number of confirmed cases** and the **7 day moving average** (to smooth out fluctuations) in Southampton. The number of **new cases peaked** in Southampton in **April** and has **experienced a sustained decline** since.

\* Cases include both pillar 1 and 2

\*\* Correct at time of publication, but may be revised in future weeks due to reporting delays

## COVID-19 confirmed cases per 100,000 population\*

Data up to 1st September

Total cases per 100k population \*\*

**403.9**

Cases per 100k population in current week \*\* (week 35)

**7.91**

Cases per 100k population in previous week \*\* (week 34)

**5.54**

Direction of travel to previous week

**Increase**

Southampton has a total of **403.9 cases per 100,000 population**. Please note, data for week 36 was not available at time of publication, so this indicator has not been updated this week.

Public Health England publish weekly the number of cases per 100,000 population in their COVID-19 Surveillance reports. The trend in the weekly number of cases per 100,000 population is shown in the chart to the left. In the most recent week (**week 35**) there were **7.91 cases per 100,000 population**, which is an **increase** compared to the **previous week (5.54 cases per 100,000 population in week 34)**. Overall, the number of **infections remain relatively low**.

**Numbers of cases vary by week and day** (see case numbers above). **Case numbers are also subject to revisions**, especially most recent data. It should be noted that low case numbers can impact on the **reliability of estimates**.

\* Cases include both pillar 1 and 2

\*\* Correct at time of publication, but subject to revision in subsequent weeks due to reporting delays

## COVID-19 related deaths

Deaths occurring up to 28th August

Community

**66**

(53 of which in care homes)

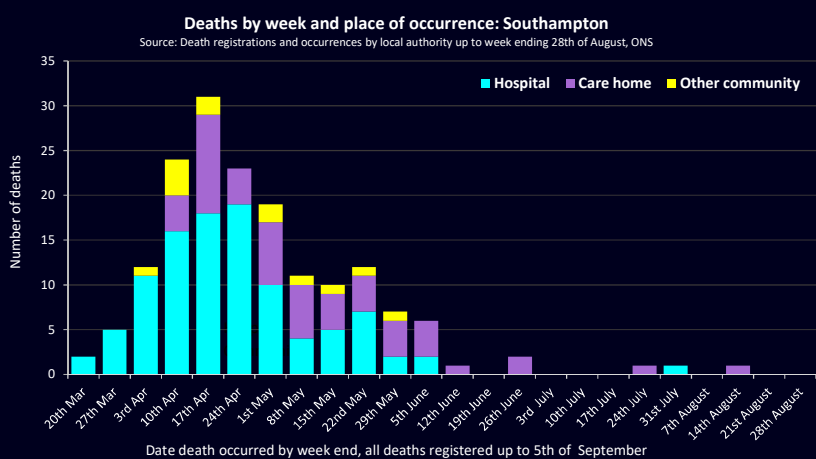

In the last week

**0**

Deaths

Change from previous week

**0**

There have been a total of **168 COVID-19 related resident deaths** in Southampton. Of those, **102 died in hospital** and **66 in the community** (**53 of which were in care homes**). There were **0 COVID-19 related deaths** in the most recent week, which is **no change** compared to the **previous week**.

The chart to the left shows the number of **COVID-19 related deaths by week and setting**. The number of **COVID-19 related deaths peaked in mid-April** and have declined since.

In Southampton, resident **deaths** have now come down to **expected levels** compared to previous years.

Latest data shows that there were **no COVID-19 related deaths in University Hospital Southampton (UHS)** in the last week (3rd to 9th September). This data is different from that published by ONS as it doesn't necessarily include Southampton residents, only those who have died at UHS.

## Potential COVID-19 Pathways

Data up to 10th September

999 calls

Total in last 7 days

**3**

Change in last 7 days

**-11**

111 calls

**149**

**+76**

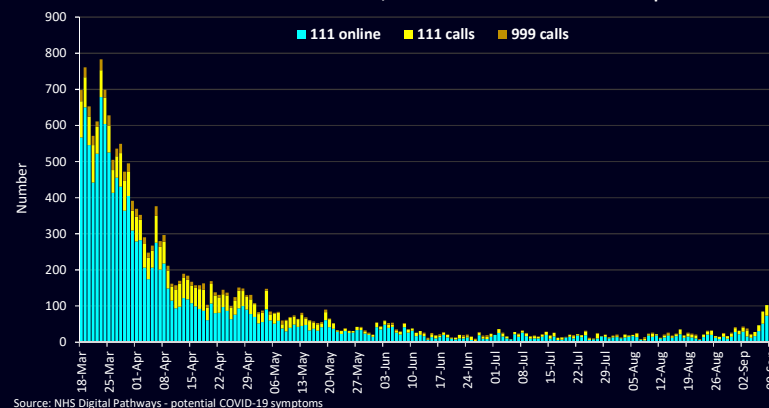

111 online

**289**

**+154**

Potential COVID-19 999 calls, 111 calls and 111 online: Southampton

In the last week there have been **3 calls to 999** where people are reporting potential COVID-19 symptoms, **149 calls to 111** and **289 people reporting symptoms through 111 online**. There has been a **decrease** in the number of **999 calls (-11)** reporting potential COVID-19 symptoms, an **increase** in the number of **111 calls (+76)** and an **increase** in **111 online triages (+154)** in the last 7 days.

Overall numbers remain **relatively low** compared to the overall trend. However, the recent **increases** in the volume of **NHS 111 calls and online triages** may provide an early warning that the direction of travel is **beginning to change**, and needs to be **carefully monitored** in coming days and weeks.
