SOUTHAMPTON CITY COUNCIL

North East Neighbourhood

NE

Neighbourhood health aims to bring health, care and community services together around local populations, providing more joined-up, preventative care closer to home. The approach seeks to improve health outcomes, reduce inequalities and reduce avoidable pressure on services.

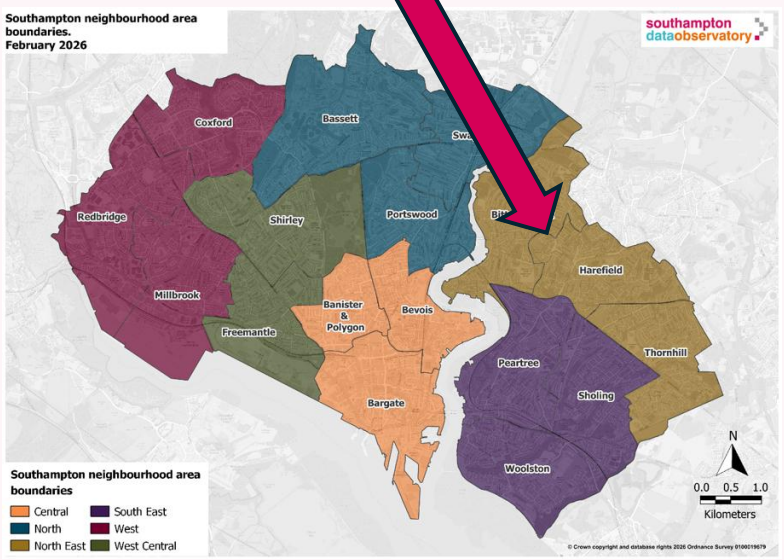

Six neighbourhood areas have been defined in Southampton (with a population of 30 to 50 thousand residents) through engagement with local organisations, voluntary sector, community partners and elected members.

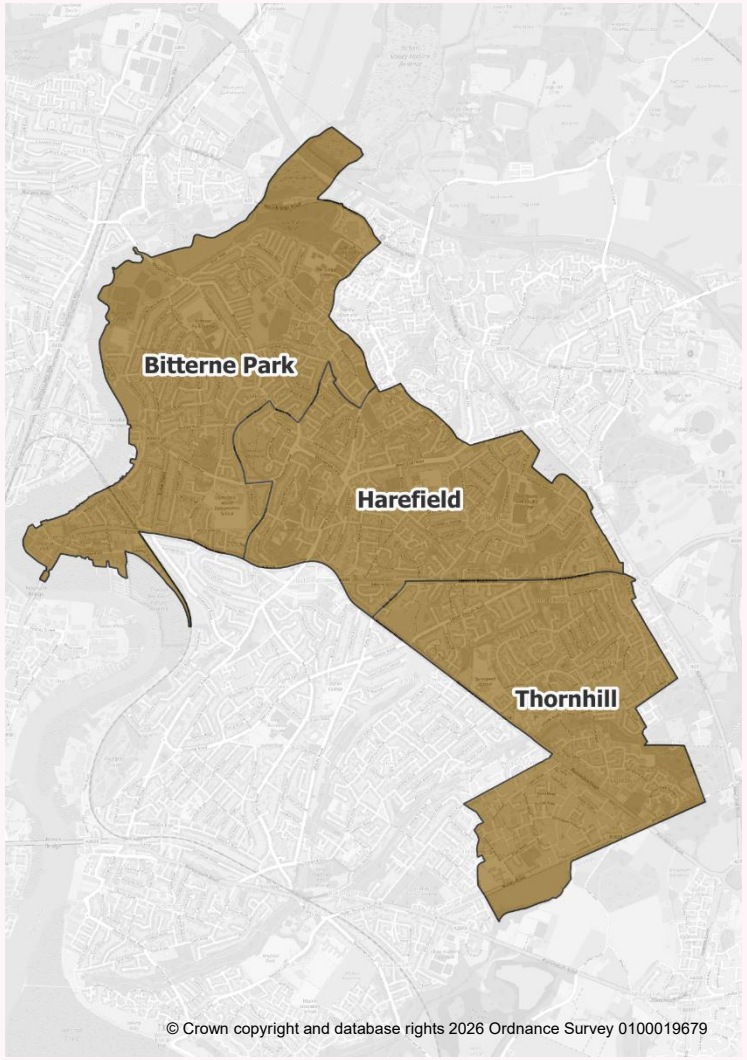

Each neighbourhood area has been profiled to understand its unique composition and need. These profiles will be used alongside local knowledge and community representation to prioritise and inform neighbourhood health delivery in Southampton (and monitor progress over time).

Broad generalisations have been made about what makes each neighbourhood area different (using available data) but there are many individual residents in each neighbourhood area who do not fit the profile.

North East NE

Population: 42,705

North East Neighbourhood

The North East neighbourhood area is made up of three wards with different deprivation profiles. More than 34% of residents here live in the most deprived areas in England (the most deprived 20% LSOAs in England by IMD1), most of these residents live in Thornhill.

In total, North East is more deprived than the city average, where just under 25% of residents live in IMD1. Harefield is less deprived than Thornhill but is still more deprived than the England average. Bitterne Park is one of the least deprived wards in the city.

Bitterne Park is significantly better than the city average for many health, crime and education measures. Thornhill is often significantly worse (with Harefield somewhere between the two). This high, medium and low pattern is a recurring theme within this neighbourhood area.

Female life expectancy is 5.5 years shorter in Thornhill compared to Bitterne Park (3.3 years shorter for males). Thornhill has some of the city's greatest health and care needs, which aren't always visible when looking at the neighbourhood area level (as Bitterne Park improves the area's statistics).

North East has the most residents aged 65+ years of all neighbourhood areas.
It also has the most residents aged 0 to 15 years. The population here is forecast to grow by 1% in the next 5 years, mainly in the older age groups. This is lower than the forecast total population growth for the city (+4%).

Higher children's and Adult Social Care need

Three distinct wards with different profiles

Inequality within Neighbourhood area

Health & Care Summary

The neighbourhood area with the most residents at the oldest and youngest ends of the scale. This population structure alone means it is likely to have a higher need for both Adult and Children's Social Care. Thornhill has the worst self-reported health in the city.
Key themes: Children's Social Care / early years (Thornhill), healthy ageing, falls prevention, obesity, tobacco, alcohol & drugs (Thornhill).

Population

North East has the most residents aged 65+ years of all neighbourhood areas and also has the most residents aged 0 to 15 years. It has the smallest percentage of working age residents (16 to 64 years).

Deprivation

The map on the right shows how this neighbourhood area is split three ways by deprivation: Thornhill in the East is significantly more deprived than Bitterne Park in the West. Harefield (in the middle) has a mix of low and high deprivation.

9 areas (LSOAs) in the North East are among the 20% most deprived nationally and 1 within the 20% least deprived.

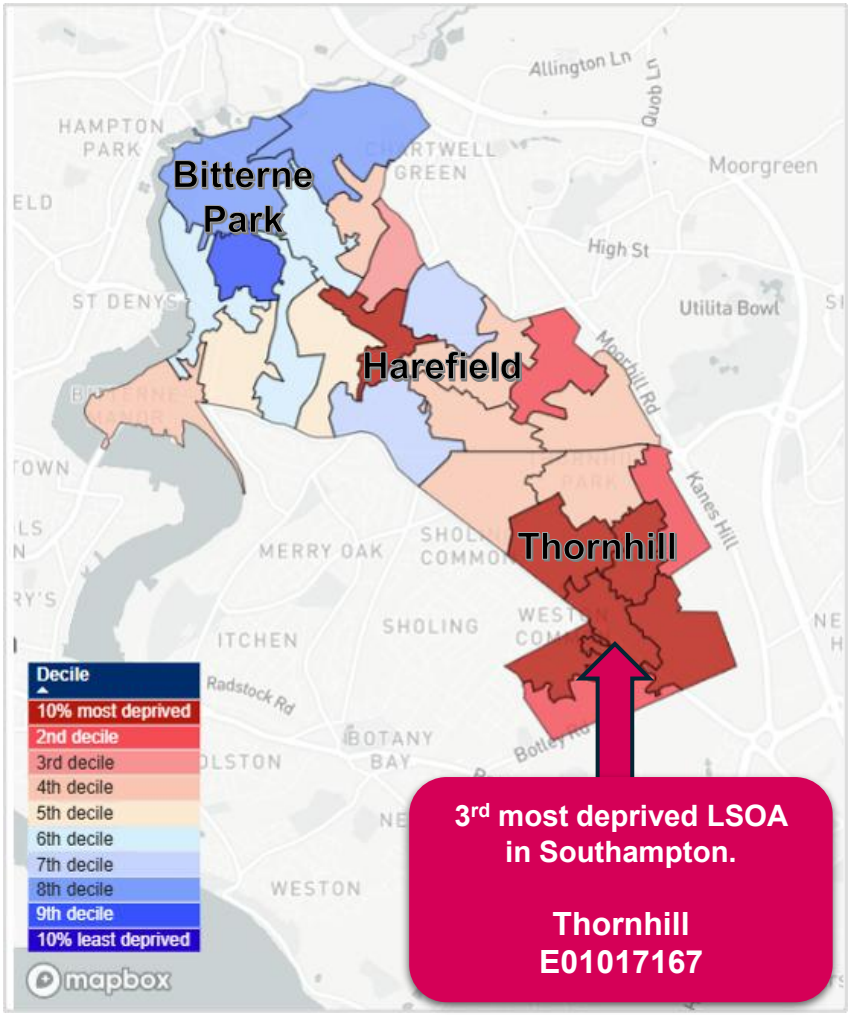

34.2% (14,572) of residents within the North East live within the 20% most deprived LSOAs nationally, which is significantly higher than the city average (24.3%).

Deprivation by LSOA (IMD25)

North East

Frailty

Percentages and counts of 65+ patients in Southampton with hypertension, polypharmacy and severe frailty (eFi) by neighbourhood area. (Ranked by percentages).

Higher number of patients at 'high falls risk'

Lower percentage of severely frail patients

Severe Frailty (eFi)
Prevalence and count of patients (Feb 2026)

16.0% 595 patients -> Central
14.5% 873 patients -> North
13.5% 1,005 patients -> South East
11.8% 820 patients -> West
10.5% 750 patients -> North East
10.5% 405 patients -> West Central

Polypharmacy
Prevalence and count of patients (Feb 2026)

16.5% 1,145 patients -> West
13.5% 960 patients -> North East
12.7% 946 patients -> South East
11.4% 684 patients -> North
12.2% 456 patients -> Central
11.4% 443 patients -> West Central

Hypertension
Prevalence and count of patients (Feb 2026)

53.6% 3,732 patients -> West
52.4% 3,727 patients -> North East
51.6% 3,098 patients -> North
51.4% 3,842 patients -> South East
50.7% 1,887 patients -> Central
48.9% 1,893 patients -> West Central

'High Falls Risk' Group, Polypharmacy, Hypertension & Severe Frailty (eFi)
Prevalence and count of patients (Feb 2026)

5.6% 209 patients -> Central
5.1% 353 patients -> West
4.8% 341 patients -> North East
4.8% 286 patients -> North
4.5% 337 patients -> South East
3.2% 125 patients -> West Central

Source: HIOW ICB Population Health Management

Despite the relatively large number of residents aged 65+ in the North East, the number of severely frail patients (750) is around the average (741). This is due to this neighbourhood area having one of the lowest rates of severe frailty among patients aged 65+ (10.5%).

Hypertension and polypharmacy is more common in North East. When combining patients with hypertension, polypharmacy and severe frailty into one (high risk of falls) group, North East has the second highest number of patients in the city (341).

While the percentage of severely frail patients here is relatively low, the high prevalence of hypertension and polypharmacy (combined with the large 65+ population) means there is a significant group of residents in the North East at higher falls risk.

Digital & Health Literacy

Southampton's Digital and Health Literacy Index (DHLI) combines ten indicators to identify areas of the city where residents may face barriers accessing or navigating health support and using digital / online services. The indicators are proxy measures of potential need and should be considered alongside local knowledge and community insight.

The DHLI shows that the North East neighbourhood area may have some significant challenges when accessing or navigating health services (particularly online services).

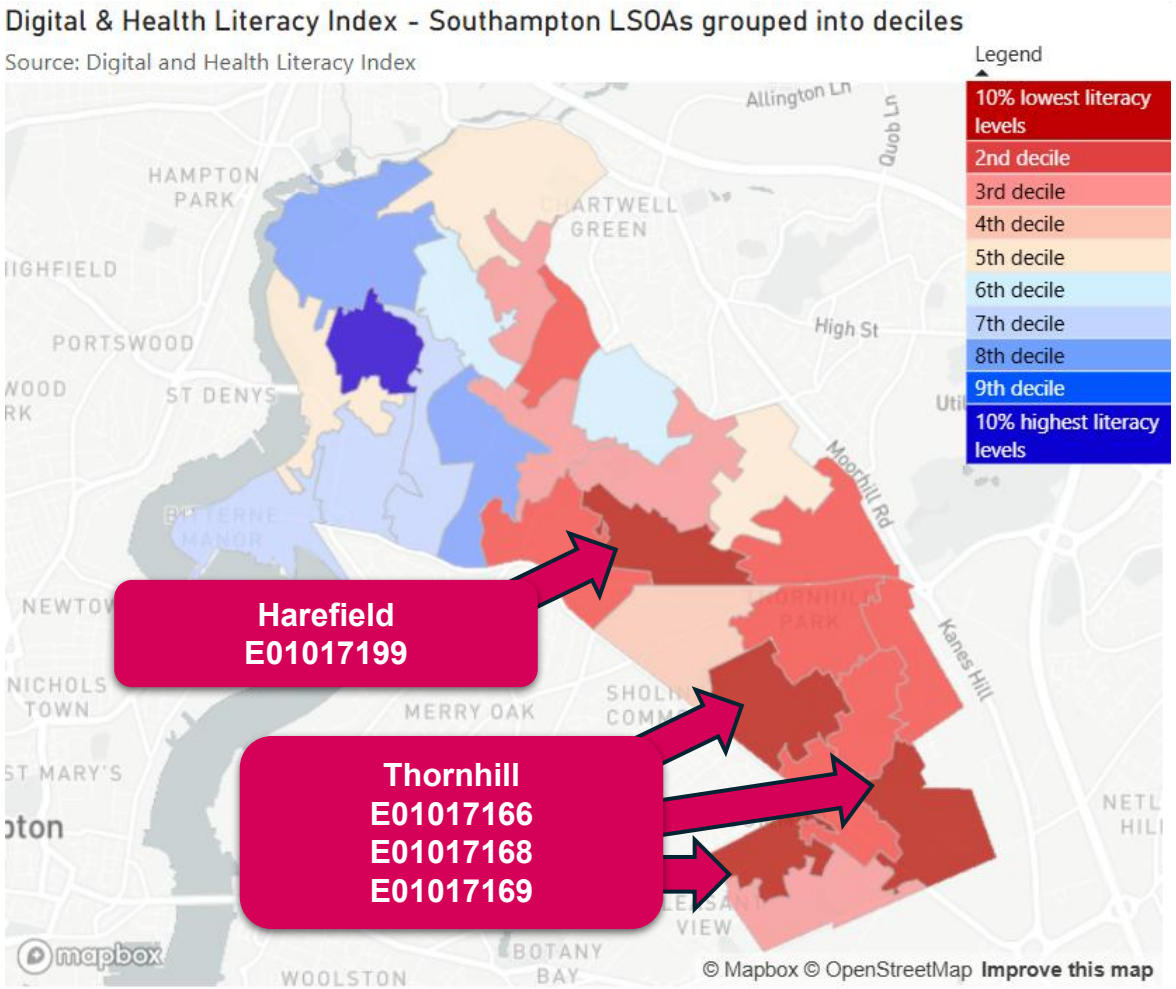

Thornhill is almost completely in the worst 3 deciles for DHLI, Harefield is also (mostly) worse than the city average.
Parts of Bitterne Park have good health literacy and digital literacy.

The index also shows that parts of the North East have some of the worst rates in the city for missed GP appointments.

1 area (LSOA) with the best, 4 with the worst DHLI scores in the city

Missed GP appointments a major factor here, the worst rates in the city

Digital & Health Literacy Index
North East

Key Themes

By many measures in this profile, there is a stark inequality between Bitterne Park and Thornhill. Bitterne Park has some of the best self reported health and life expectancy in the city, Thornhill has some of the worst.

Thornhill's female residents are expected to live 5.5 years less than females in Bitterne Park.

Life expectancy & health

		Bitterne Park	Harefield	Thornhill	North East Average	City Average

The North East has the second highest rate of home ownership in Southampton (56%) and one of the lowest proportions private rented (17%) across all neighbourhood areas. This is partly due to the area's older age profile (who are more likely to own their own homes).

It also has significantly less greenspace than the city average (13.5% compared to 14.7% for the city).
